

Bhargav Sai Teja Lakkimsetty

Java Full Stack Developer

USA | +1 (860) 597-0240 | Email: Saitejabhargav15@gmail.com| [LinkedIn](#)

Professional Summary

Java Full Stack Developer with 5 years of experience designing, developing, and deploying scalable enterprise web applications across cloud and distributed environments. Skilled in Java, Spring Boot, Microservices, React, Angular, REST APIs, SQL/NoSQL databases, and cloud platforms such as AWS and Azure. Proven experience delivering high-performance backend services, building responsive front-end applications, and optimizing database systems for large-scale data processing. Adept at Agile development, CI/CD automation, containerized deployments, and cloud-native architecture, consistently improving application performance, scalability, and development efficiency.

Professional Experience

Java Full Stack Developer Intern, IBM, USA	July 2025 – Present
- Contributed to the development of enterprise microservices using Java, Spring Boot, and REST APIs, enabling scalable backend services that processed over 1M+ API requests per day while maintaining system response times under 200ms. - Designed and implemented frontend modules using React.js and TypeScript, creating dynamic UI components and improving user interaction performance by 30% through optimized state management and asynchronous API calls. - Built secure backend services using Spring Security and OAuth authentication, strengthening API protection mechanisms and reducing unauthorized access risks across enterprise applications. - Assisted in deploying containerized applications using Docker and Kubernetes on AWS cloud infrastructure, enabling automated environment provisioning and improving application deployment efficiency by 40%. - Optimized SQL queries and database indexing strategies within PostgreSQL and MongoDB environments, improving query performance and reducing backend processing latency by 25%. - Collaborated with cross-functional engineering teams in Agile sprints, participating in code reviews, feature planning, and architecture discussions to ensure high-quality, maintainable software delivery. - Took ownership of developing a backend service module for internal data analytics workflows, implementing API integrations and asynchronous data pipelines that automated reporting processes and reduced manual processing effort by 35%.	

Java Full Stack Developer, Accenture, India	Aug 2019 – Jul 2023
- Designed and developed scalable microservices using Java, Spring Boot, and Hibernate, supporting enterprise applications handling 5M+ daily transactions across financial and customer service platforms. - Developed responsive web applications using Angular, HTML5, CSS3, and REST APIs, improving user experience and page load performance by 28% through optimized frontend rendering and caching strategies. - Implemented RESTful APIs and integrated them with external enterprise systems, enabling real-time data exchange between CRM, ERP, and internal analytics platforms. - Optimized relational database structures in MySQL and Oracle, implementing indexing, query tuning, and schema improvements that enhanced data retrieval efficiency by 35%. - Implemented CI/CD pipelines using Jenkins, Docker, and Git, automating build and deployment processes and reducing application release cycles from weekly to daily deployments. - Collaborated with DevOps and cloud engineering teams to deploy microservices on AWS infrastructure using EC2, S3, and RDS, improving application scalability and system uptime to 99.9% availability.	

Software Developer Intern, HCL Tech, India	Jun 2018 – Jul 2019
- Assisted in developing backend modules using Java, Spring MVC, and Hibernate, contributing to enterprise web applications that supported internal business operations and customer management workflows. - Built frontend components using HTML, CSS, JavaScript, and Bootstrap, creating responsive UI layouts that improved application usability across desktop and mobile platforms. - Supported database design and query development in MySQL environments, improving data processing efficiency and enabling faster reporting capabilities for business users. - Participated in software testing and debugging activities using JUnit and Selenium, identifying application defects and improving code stability before production releases.	

Technical Skills

Programming Languages: Java, JavaScript, TypeScript, SQL, Python Backend Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Node.js Frontend Technologies: React.js, Angular, HTML5, CSS3, Bootstrap, Material UI Microservices & APIs: RESTful APIs, GraphQL, Microservices Architecture, API Gateway Databases: MySQL, PostgreSQL, Oracle, MongoDB, Redis Cloud Platforms: AWS (EC2, S3, Lambda, RDS), Microsoft Azure, Google Cloud DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI Messaging & Streaming: Apache Kafka, RabbitMQ Testing & QA: JUnit, Mockito, Selenium, Cypress Version Control & Tools: Git, GitHub, Bitbucket, Maven, Gradle Architecture & Design: OOP, Design Patterns, Event-Driven Architecture, Domain Driven Design Project Management & Methodologies: Agile, Scrum, Jira, Confluence.	
--	--

Education

Masters Anderson University, South Carolina, USA.	Dec 2023 - Aug 2025
Bachelor Sarvepalli Radhakrishnan University, Bhopal. India.	June 2015 - Aug 2018
